### **Status of Application**

1. Applicant's amendment, filed after Final Rejection, of 8 December 2003, has been entered in the application. The finality of the previous office action is hereby withdrawn.

### **Claim Rejections - 35 USC § 102**

2. The indicated allowability of claims 32, 42 and 43 is withdrawn in view of the newly discovered reference(s) to Parks. Rejections based on the newly cited reference(s) follow.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 32, 42 and 43 are rejected under 35 U.S.C. 102(e) as being anticipated by Parks (US 6,531,838, filed 4/26/02). Parks teaches a scooter having a running board (11) supported by front (23) and rear (12) wheels, the front wheel being connected to a handlebar (22) by a steering shaft (21), a motor assembly (27) detachably coupled to the shaft by a clamp (46, 47, 48) which may loosened and slid along the shaft (to the extent allowed by the diameter of the shaft and the notch 30), a battery case (40) a motor (35) with an output shaft (44), and further including a biasing mechanism (38) which urges the motor shaft into contact with the front wheel periphery,

Art Unit: 3618

the biasing element may be a spring (see col. 3, lines 12-13; col. 5, lines 3-9) wherein a further battery case (40) may be provided directly above the motor (col. 4, lines 21-22) resulting in the biasing device being located between the case and motor; the assembly further including an outer case (50, see col. 3, lines 36-40) which houses the battery case(s) and motor, and which may be slid with respect to the clamp (46, 47, 48) when it is disengaged from the assembly, to the breadth claimed.

### **Response to Comments**

5. Applicant's comments concerning the amendments are noted. Please note the newly uncovered reference to Parks, now applied.
